Islamic University of Technology (IUT)

Halal and Haram in Contemporary & Digital Life

HUM 4145/4137 : Islamiyat

What do you know about Halal and Haram?

*How do Halal and Haram concepts apply to your life as
Computer Science & Engineering students?*

Outline: Halal and Haram in Contemporary & Digital Life

- Fundamental Concepts of Halal and Haram
- Sources and Methodology of Determining Halal and Haram
- The Golden Principle: Doubts and Gray Areas
- Halal and Haram in Contemporary Life
- Digital Ethics for Muslim Engineers
- Halal and Haram in Software Development
- Intellectual Property and Piracy
- Online Transactions and E-Commerce
- Social Media Ethics
- Artificial Intelligence and Machine Learning Ethics
- Data Privacy and Cybersecurity
- Case Studies and Practical Scenarios
- Conclusion and Exam Guidelines

PART I

Fundamental Concepts

What is Halal (حلال)?

Halal literally means "permissible" or "lawful" in Arabic. It refers to anything that is allowed according to Islamic law (Shariah).

The Quran says:

يَا أَيُّهَا النَّاسُ كُلُوا مِمَّا فِي الْأَرْضِ حَلَالًا طَيِّبًا

"O mankind! Eat of that which is lawful and good on the earth..."
(Surah Al-Baqarah, 2:168)

What is Haram (حرام)?

Haram literally means "forbidden" or "prohibited". It refers to anything that is explicitly forbidden by Islamic law.

Prophet Muhammad (ﷺ) said:

"The halal is clear and the haram is clear, and between them are matters unclear that are unknown to most people."

(Sahih al-Bukhari & Muslim)

Five Categories of Islamic Rulings

1. Fard/Wajib (واجب/فرض)

Obligatory - must be done

2. Mustahabb/Sunnah (مستحب)

Recommended - rewarded if done

3. Mubah (مباح)

Permissible - neutral

4. Makruh (مكروه)

Disliked - better to avoid

5. Haram (حرام)

Forbidden - must be avoided

PART II

Sources and Methodology

Sources of Determining Halal and Haram

Primary Sources

- 1. The Noble Qur'an
The direct word of Allah
- 2. Authentic Sunnah
Teachings and practices of Prophet Muhammad (ﷺ)

Secondary Sources

- 3. Ijma (إجماع)
Scholarly consensus
- 4. Qiyas (قياس)
Analogical reasoning

The Golden Principle: Avoiding Doubtful Matters

Prophet Muhammad (ﷺ) said:

"That which is lawful is clear, and that which is unlawful is clear, and between the two of them are doubtful matters about which many people do not know. Thus, he who avoids doubtful matters clears himself in regard to his religion and his honor, but he who falls into doubtful matters falls into that which is unlawful..."

(Sahih al-Bukhari & Muslim)

△□ When in doubt, it's better to avoid!

General Principles in Islamic Jurisprudence

1. الأصل في الأشياء الإباحة –

The basic rule is that things are permissible (unless proven otherwise)

2. لا ضرر ولا ضرار –

No harm and no reciprocating harm (Harm must be eliminated)

3. الضرورات تبيح المحظورات –

Necessities permit the prohibited (in extreme situations)

4. ما أدى إلى الحرام فهو حرام –

What leads to Haram is itself Haram

5. درء المفاسد أولى من جلب المصالح –

Preventing harm takes precedence over securing benefits

PART III

Contemporary Issues

Why This Matters for CSE/SWE Students?

- You will develop software and systems that impact millions of people
- Your code and applications have ethical implications
- You'll face unique moral dilemmas that previous generations didn't encounter
- Technology is neutral - it's how we use it that determines Halal or Haram
- Your profession requires clear understanding of Islamic ethics in the digital age
- You have a responsibility as Muslims in shaping the future of technology

Digital Ethics for Muslim Engineers

As Muslim engineers, you must consider:

- Purpose - What is the software being used for?
- Impact - Who benefits and who might be harmed?
- **Transparency - Are users informed about how their data is used?**
- Justice - Does the technology promote fairness or discrimination?
- **Privacy - Are we protecting user privacy as Amanah (trust)?**
- Accountability - Can we stand before Allah for what we create?

Halal in Software Development ✓

- Developing educational applications and platforms
- Creating tools for business productivity and efficiency
- Building healthcare and medical applications
- Developing Islamic apps (Quran, Prayer times, Qibla finder)
- Creating e-commerce platforms for halal products
- Building communication tools for beneficial purposes
- Developing scientific research and data analysis tools
- Creating accessibility tools for people with disabilities
- Building agricultural technology for food security

Haram in Software Development X

- Developing **gambling** platforms or **casino** games
- Creating apps for **alcohol delivery or promotion**
- Building dating/hookup applications
- Developing **pornographic** or adult content platforms
- Creating hacking tools for **malicious purposes**
- **Building surveillance systems for oppression (Gaza/Palestine etc.)**
- Developing **interest-based (Riba) lending platforms**
- Creating **deepfake** or **deceptive** technology for harm
- Building platforms that spread **misinformation** or **hate**

Gray Areas - Doubtful Matters in Software □

Some applications have mixed uses - analyze carefully:

- Social media platforms (Can be used for good or evil)
- Video streaming services (Content varies)
- Gaming platforms (Depends on game content and addiction risk)
- Cryptocurrency platforms (Scholarly debate on permissibility)
- Music streaming apps
- Ad-supported apps (If ads promote Haram content)
- Dual-use security tools (Can be used defensively or offensively)

△□ Apply the principle: When in doubt, avoid it or consult scholars!

Intellectual Property and Software Piracy

Islamic Principle:

"Do not consume one another's wealth unjustly..." (Quran 2:188)

Intellectual property is a form of wealth protected in Islam

✓ Halal:

- Using open-source software (MIT, GPL, Apache licenses)
- Purchasing legitimate software licenses
- Using free trial periods properly
- Creating your own original code

✗ Haram:

- Using cracked/pirated software
- Sharing paid software without permission
- Using stolen API keys or credentials

Prophet Muhammad (ﷺ) said:

"Whoever cheats us is not one of us."

(Sahih Muslim)

💡 **Using pirated software is a form of cheating and deception!**

Online Transactions and E-Commerce

Key Islamic Principles for Online Business:

- Honesty in product description and quality
- Avoiding Riba (interest-based transactions)
- No Gharar (excessive uncertainty or deception)
- Ensuring products sold are Halal
- Fair pricing without exploitation
- Transparent return and refund policies
- Protecting customer data as Amanah (trust-Not Selling them to third Party for Money)
- Avoiding fraud, scams, or Ponzi schemes

Cryptocurrencies and Digital Finance

⚠️ **Scholarly Debate:** There is no unanimous consensus on cryptocurrencies in Islam. Different scholars have different opinions based on various factors.

Concerns from Islamic perspective:

- Excessive speculation (Gharar) and uncertainty
- Lack of intrinsic value in some coins
- Use in illegal activities
- High volatility leading to gambling-like behavior

💡 **Recommendation:** Consult knowledgeable scholars and avoid if doubtful!

Social Media Ethics in Islam

✓ Halal Uses:

- Sharing beneficial knowledge
- Calling to good (Da'wah)
- Staying connected with family
- Professional networking
- Educational content

✗ Haram Actions:

- Spreading lies/rumors
- Backbiting (Gheebah)
- Sharing inappropriate content
- Cyberbullying or harassment
- Time-wasting excessively-
Reels/Shorts/Funny Contents.

"O you who believe! Avoid much suspicion... and do not backbite one another."
(Quran 49:12)

Data Privacy and Cybersecurity Ethics

Islamic Concept of Amanah (Trust):

"Indeed, Allah commands you to render trusts to whom they are due..." (Quran 4:58)

User data is an Amanah (trust) - you MUST protect it!

- Implement strong encryption for sensitive data
- Collect only necessary data (principle of minimalism)
- Be transparent about data collection and usage
- Secure databases against breaches and attacks
- Never sell or misuse user data
- Give users control over their own data
- Comply with privacy laws (GDPR, etc.)
- Report data breaches honestly and promptly

Hacking and Cybersecurity

✓ Ethical (White Hat) Hacking:

- Penetration testing with permission
- Bug bounty programs
- Security research for protection
- Defensive cybersecurity measures

✗ Unethical (Black Hat) Hacking:

- Unauthorized access to systems
- Stealing data or credentials
- Creating malware or viruses
- DDoS attacks
- Identity theft
- Ransomware attacks

💡 Cybersecurity skills should be used to protect, not to harm or steal!

Artificial Intelligence and Machine Learning Ethics

AI is a powerful tool - use it responsibly!

- ✓ Beneficial AI: Healthcare diagnosis, disaster prediction, accessibility tools
- ✓ Transparency: Users should know when they're interacting with AI
- ✓ Fairness: Avoid algorithmic bias against race, gender, or religion
- ✓ Accountability: Developers are responsible for AI behavior
- ✗ Harmful AI: Autonomous weapons, mass surveillance, deepfakes for deception
- ✗ Replacing human judgment in critical ethical decisions
- ✗ AI that violates privacy or dignity of individuals
- ✗ Biased AI that discriminates against protected groups

PART IV

Case Studies

Practical Scenarios

Case Study 1: The Freelance Project

Scenario:

A company offers you a high-paying freelance project to develop an online betting platform. The work is legal in their country. What should you do?

Islamic Analysis:

- Gambling is explicitly Haram in Islam (Quran 5:90-91)
- Even if legal in some countries, it remains Haram for Muslims
- Earning from Haram source makes the income Haram
- The principle: What leads to Haram is itself Haram

✗ DECISION: Reject the project, regardless of the payment!

Case Study 2: The Database Access

Scenario:

You're a database administrator with access to customer payment information. Your colleague asks you to look up a customer's credit card details for 'verification purposes.' What do you do?

Islamic Analysis:

- Customer data is an Amanah (trust) - Quran 4:58
- Accessing data without proper authorization violates trust
- Privacy is a right protected in Islam
- You must follow proper procedures and policies

✓ **DECISION: Refuse and direct them through proper channels!**

Case Study 3: The Software License

Scenario:

You need Adobe Photoshop for your university project. Your friend offers to share his cracked version. The legitimate license costs \$20/month. What should you do?

Islamic Analysis:

- Using pirated software is theft of intellectual property
- The Prophet (ﷺ) said: 'Whoever cheats us is not one of us'
- There are Halal alternatives: Student discounts, free trials, open-source alternatives (GIMP)

✓ **DECISION:** Use legal alternatives - student license, GIMP, or Canva!

Case Study 4: The Social Media Algorithm

Scenario:

You're working on a social media app. Your manager asks you to modify the algorithm to maximize user engagement, even if it means showing more controversial and divisive content. What do you do?

Islamic Analysis:

- Spreading division and controversy is harmful (Darar)
- "Do not spread corruption on earth" (Quran 2:60)
- Prioritizing profit over social good is unethical
- Engineers have responsibility for societal impact

⚠️ DECISION: Raise ethical concerns, propose better alternatives!

Decision-Making Framework for Engineers

When facing an ethical dilemma, ask yourself:

1. Is it explicitly mentioned in Quran or Hadith?
2. What is the purpose (Maqasid) behind this work?
3. Who benefits and who might be harmed?
4. Does it promote good or evil in society?
5. Am I being honest and transparent?
6. Would I be comfortable explaining this to Allah on the Day of Judgment?
7. What do knowledgeable scholars say about this?
8. Can I find a Halal alternative?

Key Takeaways

- Islam provides clear guidance on what is permissible and forbidden
- Technology is a tool - its permissibility depends on usage and purpose
- Intellectual property rights are protected in Islam
- Data privacy is an Amanah (trust) that must be safeguarded
- Avoid doubtful matters and questionable gray areas
- Your profession as an engineer carries ethical responsibilities
- Earning Halal income is a form of worship
- When in doubt, consult knowledgeable scholars
- The principle: What leads to Haram is itself Haram
- Prioritize your Akhirah (afterlife) over temporary worldly gains

Resources for Further Learning

Books:

- The Lawful and the Prohibited in Islam - Yusuf al-Qaradawi
- Islamic Perspective on Wealth Creation - Dr. Umer Chapra

Online Platforms:

- SeekersGuidance (seekersguidance.org)
- IslamQA (islamqa.info)
- Yaqeen Institute (yaqeeninstitute.org)

Local Resources:

- Consult IUT's Islamic Studies faculty
- Attend Islamic finance and ethics seminars

وَمَا خَلَقْتُ الْجِنَّ وَالْإِنْسَ إِلَّا لِيَعْبُدُونِ

"And I did not create the jinn and mankind except to worship Me."

(Quran 51:56)

Every action in your professional life can be an act of worship if done with the right intention and in accordance with Islamic principles.

Summary

- ✓ Fundamental Concepts of Halal and Haram
- ✓ Sources and Methodology
- ✓ The Golden Principle: Avoiding Doubts
- ✓ Digital Ethics for Muslim Engineers
- ✓ Software Development Ethics
- ✓ Intellectual Property and Piracy
- ✓ Online Transactions and Cryptocurrencies
- ✓ Social Media Ethics
- ✓ Data Privacy and Cybersecurity
- ✓ AI and Machine Learning Ethics
- ✓ Case Studies and Decision Framework

Exam Preparation Guidelines

Be prepared to:

- Define Halal and Haram with Quranic references
- Explain the five categories of Islamic rulings (Fard, Mustahabb, Mubah, Makruh, Haram)
- List and explain the sources of determining Halal and Haram (Quran, Sunnah, Ijma, Qiyas)
- Apply the principle of avoiding doubtful matters to modern scenarios
- Analyze ethical dilemmas in software development from Islamic perspective
- Discuss intellectual property rights in Islam
- Explain the concept of Amanah in data privacy and cybersecurity
- Differentiate between ethical and unethical uses of technology
- Provide examples of Halal and Haram in contemporary digital life
- Discuss AI and machine learning ethics from Islamic viewpoint
- Apply decision-making framework to case studies

Sample Exam Questions

1. Explain the concept of Halal and Haram with references from the Quran and Hadith. How do these principles apply to software engineering?
2. Discuss the Islamic ruling on software piracy. Support your answer with relevant Islamic principles.
3. As a Muslim software engineer, what ethical considerations should you keep in mind when developing AI systems?
4. Analyze the permissibility of working on cryptocurrency trading platforms from an Islamic perspective.
5. Explain the concept of Amanah (trust) and how it applies to data privacy in modern applications.

مع السلامة

Thank You

May Allah guide us all to what is Halal and keep us away from Haram

Islamic University of Technology (IUT)

Sources of Islamic Code of Life

Usul al-Fiqh Basics

مقاصد الشريعة

Maqasid al-Shariah: The Objectives of Islamic Law

HUM 4145/4137 : Islamiyat

Where do Islamic rulings come from?

How do we know what is permissible and what is forbidden?

Outline: Sources of Islamic Code of Life

Understanding Usul al-Fiqh

Primary Sources: The Qur'an

Primary Sources: The Sunnah

Secondary Sources: Ijma (Consensus)

Secondary Sources: Qiyas (Analogical Reasoning)

Other Sources and Methodologies

Maqasid al-Shariah: The Five Objectives

Protection of Religion (Din)

Protection of Life (Nafs)

Protection of Intellect (Aql)

Protection of Lineage (Nasl)

Protection of Wealth (Mal)

Applying Sources to Contemporary Issues

PART I

Understanding Usul al-Fiqh

أصول الفقه

What is Usul al-Fiqh?

أصول الفقه

Definition:

Usul al-Fiqh means "Principles of Islamic Jurisprudence" - the methodology and sources used to derive Islamic rulings and laws.

Breaking it down:

Usul = Roots, Foundations, Principles

Fiqh = Understanding, Jurisprudence, Islamic Law

Why important for CSE/SWE students?

Understanding the methodology helps you make informed decisions about new technologies and modern issues not explicitly mentioned in classical texts.

The Four Main Sources of Islamic Law

PRIMARY SOURCES

1. The Qur'an- The word of Allah
2. The Sunnah- Teachings of Prophet Muhammad ﷺ

SECONDARY SOURCES

3. Ijma- Scholarly consensus
4. Qiyas- Analogical reasoning

Hierarchy:

The Qur'an has the highest authority, followed by authentic Sunnah. Secondary sources (Ijma and Qiyas) are used when the Qur'an and Sunnah do not explicitly address an issue.

PART II

The Noble Qur'an

القرآن الكريم

The First and Primary Source

The Qur'an - The Primary Source

وَنَزَّلْنَا عَلَيْكَ الْكِتَابَ تِبْيَانًا لِّكُلِّ شَيْءٍ

And We have sent down to you the Book as clarification for all things...
(Surah An-Nahl, 16:89)

Key Characteristics:

- Direct word of Allah (SWT), revealed to Prophet Muhammad ﷺ
- Preserved perfectly for over 1400 years without alteration
- Universal and timeless guidance for all humanity
- Contains both explicit and implicit rulings
- Addresses fundamental principles rather than all specific details
- Source of Aqeedah (belief), Shariah (law), and Akhlaq (morality)

The Sunnah

السنة النبوية

The Second Primary Source

The Sunnah - The Second Primary Source

The Sunnah includes the sayings (Hadith), actions, and approvals of Prophet Muhammad ﷺ.

وَمَا آتَاكُمُ الرَّسُولُ فَخُذُوهُ وَمَا نَهَاكُمْ عَنْهُ فَانْتَهُوا

And whatever the Messenger has given you - take it; and what he has forbidden you - refrain from it. (Surah Al-Hashr, 59:7)

Three Types of Sunnah:

1. Sunnah Qawliyyah - The Prophet's Sayings (Hadith)
2. Sunnah Fi'liyyah - The Prophet's Actions
3. Sunnah Taqririyyah - The Prophet's Approvals

Authenticating Hadith

Science of Hadith Criticism

Not all narrations are authentic. Scholars developed a rigorous science to verify authenticity.

Sahih - Authentic	Highest level, used for rulings
Hasan - Good	Acceptable for rulings
Da'if - Weak	Not used for legal rulings sometimes for Nawafil or Extra A'mal
Mawdu' - Fabricated	Rejected completely

PART III

Secondary Sources

Ijma and Qiyas

Ijma - Scholarly Consensus

إجماع

Definition:

Ijma means the unanimous agreement of qualified Islamic scholars on a particular ruling in a specific era.

Conditions for Ijma:

Agreement must be from qualified scholars (Mujtahideen)

Must be on a matter of Shariah (Islamic law)

Consensus must be complete and unanimous

Cannot contradict clear texts from Qur'an or Sunnah

Qiyas - Analogical Reasoning

قياس

Definition:

Qiyas is applying the ruling of an established case to a new case based on a shared effective cause.

Four Elements of Qiyas:

1. Al-Asl - The Original Case (mentioned in Qur'an/Sunnah)
2. Al-Far' - The New Case (requiring a ruling)
3. Al-Hukm - The Ruling of the original case
4. Al-'Illah - The Effective Cause (common reason)

Qiyas Applied to Modern Technology

Example: Is Cryptocurrency Mining Permissible?

1. Al-Asl: Gold mining is permissible
2. Al-Far': Cryptocurrency mining
3. Al-'Illah: Both involve effort and resources to extract value
4. Al-Hukm: If crypto meets conditions (real value, no Riba, no Gharar), it may be permissible by Qiyas.

Important Note:

Qiyas requires deep knowledge and expertise. As students, consult qualified scholars for actual rulings.

Other Sources and Methodologies

Scholars also use other methodologies (with differences of opinion):

Istihsan - Juristic preference for public interest

Maslahah Mursalah - Unrestricted public interest

Sadd al-Dhara'i - Blocking the means to evil

'Urf - Custom and cultural practice (if not contradicting Shariah)

Istishab - Presumption of continuity

Qawl al-Sahabi - Opinion of Companions

PART IV

Maqasid al-Shariah

مقاصد الشريعة

The Objectives and Purposes of Islamic Law

What is Maqasid al-Shariah?

Definition:

Maqasid al-Shariah refers to the objectives, purposes, and wisdom behind Islamic rulings. Every law in Islam serves a higher purpose for human welfare.

Why Maqasid Matters for Engineers:

Helps understand the 'why' behind Islamic rulings

Guides decision-making in new situations not covered by explicit texts

Prevents rigid literalism and promotes wise application of Shariah

Essential for evaluating modern technologies and ethical dilemmas

The Five Essential Objectives

Islamic law aims to protect and preserve five fundamental aspects:

1	Hifz al-Din - Protection of Religion	حفظ الدين
2	Hifz al-Nafs - Protection of Life	حفظ النفس
3	Hifz al-Aql - Protection of Intellect	حفظ العقل
4	Hifz al-Nasl - Protection of Lineage	حفظ النسل
5	Hifz al-Mal - Protection of Wealth	حفظ المال

1. Hifz al-Din - Protection of Religion

حفظ الدين

Preserving the Islamic faith and ensuring freedom of worship.

How Islam protects religion:

Obligations: Five daily prayers, fasting, Hajj

Prohibitions: Shirk (polytheism), apostasy

Rights: Freedom to practice religion

Education: Learning and teaching about Islam

For Engineers:

Creating Islamic apps (Quran, prayer times) protects Din. Building platforms for Islamic education serves this Maqsad.

2. Hifz al-Nafs - Protection of Life

حفظ النفس

Preserving human life and ensuring safety.

How Islam protects life:

Prohibitions: Murder, suicide, abortion without valid reason

Obligations: Seeking medical treatment when needed

Rights: Right to life, security, and self-defense

Permissions: Eating Haram food in life-threatening situations

For Engineers:

Healthcare apps and medical diagnostic tools protect Nafs. Safety systems in vehicles and buildings protect lives.

3. Hifz al-Aql - Protection of Intellect

حفظ العقل

Preserving the mind, reasoning ability, and mental health.

How Islam protects intellect:

Prohibitions: Intoxicants (alcohol, drugs) that impair judgment

Obligations: Seeking knowledge is obligatory

Encouragement: Critical thinking, reflection, research

Rights: Freedom of thought within Islamic framework

For Engineers:

Educational platforms and e-learning tools protect Aql. Avoid creating addictive apps that waste time and harm focus.

4. Hifz al-Nasl - Protection of Lineage

حفظ النسل

Preserving family structure, lineage, and human dignity.

How Islam protects lineage:

Institutions: Marriage as the proper framework for family

Prohibitions: Zina (adultery/fornication), false attribution

Rights: Rights of children, spouses, and family members

Obligations: Maintaining family ties, caring for children

For Engineers:

DNA testing apps should be used ethically. Avoid creating dating/hookup apps that promote Zina.

5. Hifz al-Mal - Protection of Wealth

حفظ المال

Preserving property rights, economic justice, and ethical business.

How Islam protects wealth:

Rights: Private property ownership, earning through lawful means

Prohibitions: Theft, fraud, Riba (usury/interest), gambling

Obligations: Zakah (wealth purification), fair trade, honoring contracts

Ethics: Transparency, honesty in transactions

For Engineers:

Blockchain for transparent transactions protects Mal. Respect intellectual property.

Fintech solutions that avoid Riba serve this Maqsad.

Three Levels of Maqasid al-Shariah

Scholars categorize Maqasid into three levels:

1. Daruriyyat - Necessities

Essential for life and faith. The Five Maqasid we discussed. Cannot be compromised.

2. Hajiyyat - Needs

Make life easier. Examples: Concessions in prayer for travelers, contracts for business.

3. Tahsiniyyat - Luxuries

Beautification and refinement. Examples: Good manners, modest dress, cleanliness beyond necessity.

PART V

Practical Application

Applying Sources to Contemporary Issues

Case Study: Developing AI Facial Recognition

Question:

Is it permissible to develop facial recognition AI?

Analysis Using Sources and Maqasid:

Qur'an: No explicit text, but principles of justice and privacy apply

Sunnah: Prophet emphasized protecting privacy

Qiyas: Compared to photography - permissible for good purposes

Maqasid Analysis:

- Protects Life (Nafs): If used for security and crime prevention
- Protects Wealth (Mal): If used to prevent fraud
- BUT: Can violate privacy if misused
- Risk: Mass surveillance can lead to oppression

Ruling: Permissible IF used ethically with strict privacy protections

Framework for Applying Islamic Sources

When facing a new issue in technology or life:

1. Check the Qur'an - Is there a clear text?
2. Check the Sunnah - Did the Prophet address this?
3. Check Ijma - Is there scholarly consensus?
4. Apply Qiyas - Can this be compared to existing ruling?
5. Analyze Maqasid - Which objectives does this serve or harm?
6. Consult Scholars - Seek guidance from knowledgeable scholars
7. Apply Golden Principle - When in doubt, avoid it

قُلْ هَلْ يَسْتَوِي الَّذِينَ يَعْلَمُونَ وَالَّذِينَ لَا يَعْلَمُونَ

Say: Are those who know equal to those who do not know?
(Quran 39:9)

Knowledge of Islamic sources empowers you to make informed decisions in
both your Deen and your profession.

Key Takeaways

- Islamic law is based on divine sources (Qur'an & Sunnah) and scholarly methodology (Ijma & Qiyas)
- Every Islamic ruling has a purpose - Maqasid al-Shariah guides us
- The five Maqasid protect: Religion, Life, Intellect, Lineage, and Wealth
- As engineers, your work can either serve or violate these Maqasid
- For new issues, use Qiyas and analyze Maqasid
- Usul al-Fiqh helps us apply Islam to modern challenges
- Always consult qualified scholars for actual rulings

Exam Preparation Guidelines

Be prepared to:

1. Define Usul al-Fiqh and explain its importance
2. List and explain the four main sources of Islamic law
3. Explain the process of authenticating Hadith
4. Define Ijma and its conditions for validity
5. Explain Qiyas with its four elements
6. List and explain the five Maqasid al-Shariah
7. Provide examples of how each Maqsad applies to technology
8. Analyze a contemporary issue using Islamic sources and Maqasid
